Note A digital camera lets you snap a picture of objects as they are. When you buy one, you _capture_ an image of the real world, store it, and then use the same camera (or a different one) to make images—like a movie—of that same world. (The term _capture_ is used because you're literally capturing it. The image _exists_ before you take the photo, but you're capturing it.)

The present invention relates to hydraulically powered work implements, such as wheel loaders. Wheeled loaders are widely used in mining, construction and various other industries where it is desirable to lift, move and load material. These loaders typically include a loader body supported by a pair of spaced, laterally extending crawlers that can be moved in a forward or reverse direction. A hydraulic system is provided to raise and lower the loaders between a transport position and an operating position. The loader body is raised and lowered by a main lift cylinder. The crawlers are raised and lowered by a pair of crawler lift cylinders. Thus, when the main lift cylinder is extended, the loader body is raised; when the main lift cylinder is retracted the loader body is lowered; and when the main lift cylinder is extended and the crawler lift cylinders are retracted, the crawlers are lowered onto the ground or other support surface. It is also known to provide an operator compartment mounted to the rear of the loader. The operator compartment is raised and lowered by a separate lift cylinder. Thus,

In a recent interview with Artisan News, Parker promises the “newest edition to the Spider-Man franchise” and he seems to be adding an ace villain in the upcoming Amazing Spider-Man 2.” “Now that we’ve had our fill, we’re ready to move forward,” says producer Avi Arad. “We had a phenomenal year with the first film, and it was an ensemble piece and, quite frankly, overstuffed. Now that we’ve had our fill, we’re ready to move forward with what we’ve been planning for the sequel.” If Parker sounds like he’s spilling the beans to a savvy interviewer, it may be because he’s either lying or he’s in a state of considerable excitement. Although the script for the sequel — in development for more than a year — has not been written, Arad and producer Laura S. Wilson say they have a treatment and, if approved by Marvel, they hope to go into production in the near future. Marvel owns the rights to Spider-Man and has stepped up its involvement by creating lucrative comic book deals that allow it to sell the rights to film and TV properties. It’s no surprise that Arad and Wilson are talking up Spider-Man 2, because they are being relatively tight-lipped about the film’s plot. But there are clues. Arad says that there won’t be a time jump in the sequel. “We’re not jumping at all. We’re not going into it with a ‘time jump’ scenario,” he said. “We’re doing it in the present day.” Wilson says they’re leaving out some of the science-fiction elements from Spider-Man’s origin and that this next film will be — as Arad called it — “seamless” to the comic-book storyline. “If you look at the storytelling in the comics, we’re going to give a lot of [the character’s] back story in the movie,” Wilson says. “It’s actually going to be very seamless.” If Arad and Wilson are not playing coy on the subject of time shifts, it could be because they want to ease
