You can also get an extremely nice GUI program that lets you do much of the same with fewer menus and dialog boxes, called GIMP, short for GNU Image Manipulation Program. Kiss and Tell You should keep in mind that your photograph's true nature cannot be changed with editing software.

Your image should be an authentic depiction of what you are taking, whether the subject is plants or paintings or animals. To preserve the true nature of

---

your pictures, be sure to protect any details you find on the print. There is no telling what may happen to that fine detail over time, but only by protecting it while you work do you have any chance of preserving that look. Photoshop includes several layers, which are images stacked together that you can work with independently. Edit with a clear theme Always have a theme in mind when you start work on your pictures. Let your pictures be about something besides themselves. For example, you may have a series of waterfall photographs, but if you have the waterfall theme stuck in your head, your images will probably start to look like what the water looks like, and not what the waterfall itself looks like. Find the theme,

---

and work toward it. As you move to other topics or subjects, don't abandon the theme. If you have lots of time on your hands, you may work on one theme for an extended period. If you keep the theme in mind at all times, it won't be a problem to switch topics. This is because your work has already been done with the theme.

You've already brought to life the image on the theme, and it doesn't have to start all over again when you change subjects. Find the theme within your subject matter, and work toward that, however long it takes.

De-clutter your work There's nothing wrong with having a lot of images on a memory card. When you go out shooting, you will inevitably acquire more than you planned, and if you're really inspired, you

---

may end up taking more pictures than you originally meant to. It's perfectly reasonable, and even acceptable, to just let your memory card take the overflow.

Some of those extra images will be good (and if not, you have an extra memory card to replace the damaged one), but some will be bad and show up in the trash bin.

Sometimes, though, you will notice that the random junk photos you added in along the way didn't really add
