Photoshop and Elements do not actually differ in their features. Photoshop Elements simply doesn't have all of the extra features that Photoshop has. Some of the more expensive features that Photoshop has like layers, text, or layers for vector images are not included in Elements. The benefits to Photoshop are twofold. Photoshop is used by photographers and graphic designers for photos and illustration. Thanks to all the media files, social media graphics, and even photos we see on daily basis, Photoshop is the go to app for editing photos. Instagrams and other social media platforms started off as Instagram users took photos, posted them and shared them on their social media posts. Photoshop was made for photos. It can be used to edit and enhance pretty much any type of photo and if you are not using Photoshop for that purpose, you are missing out on so much. The other reason Photoshop is so popular is because of its countless features and the ability to make graphics for so many different platforms. Photoshop is the designer's tool of choice to make graphics for social media, websites, brand identities, print media, retouching photos, gaming graphics and so much more. So let's begin with how to switch from Photoshop to Elements and go through a process to start using Photoshop like an Elements user! Adobe Photoshop and Adobe Photoshop Elements are adored by graphic designers and photographers alike. Despite the differences between the two apps, they have the same purpose. They both allow designers to edit and create high-quality graphics for different purposes.Why switch to Photoshop Elements? Photoshop is much more versatile than Elements and it is used by a lot of users to create graphics. Photoshop is used in so many creative fields, such as graphic design, web design, advertising, and digital illustration. With Photoshop, you can be a creator, not a consumer. You can create great graphics that will be used and shared.In this post, we are going to see how to make the switch from Photoshop to Photoshop Elements. Both Photoshop and Elements are photo and illustration editors. There is a popular belief that both Photoshop and Elements are more like a "camera replacement". However, this is not completely true. Photoshop and Elements are more than that.The other part of this is that you could say that Photoshop is a photo editor and Photoshop Elements is a photo editor. There are other very high-end graphic editors which are very different from each 05a79cecff

Microsoft released a major security update for Windows 10 today, putting out a fix for an earlier security vulnerability (CVE-2018-0122). The company says that the update is designed to address a security issue in Microsoft Edge, a component of Microsoft's web browser that is meant to run on Windows 10. It's not the first time Microsoft has released a major Windows update with a security vulnerability, but this one can be extremely dangerous because of the way it provides access to hackers. The Edge vulnerability is based on Microsoft Edge's use of sandboxed code that runs on behalf of non-administrative users. A sandbox, also known as a security sandbox, is a portion of your computer's memory that's supposed to be an isolated environment that's meant to limit the kind of malicious code that can be run on your machine. But Edge, which is one of the most heavily used web browsers in the world, will occasionally use sandbox code to install a shortcut to a website on your computer. Microsoft's fix, however, will allow hackers to open a sandbox to run malicious code on a user's machine. The three-month-old CVE-2018-0122 vulnerability could allow a hacker to find and exploit Edge if a user is visiting a malicious website. It's similar to CVE-2017-12367, which Microsoft patched in January. In that case, users could have their software compromised if they visited a malicious website while their computer was online and a malicious sandboxed extension was installed. Back then, Microsoft was quick to point out that Windows apps weren't the only vulnerable part of Windows 10. "We have determined that the EDR mechanism to unload the extensions DLL [dynamic link library] is also used by some other programs," the company said. That sort of sandboxing is common in software, and many of us have installed extensions that run in a sandbox. Microsoft claimed that the only real solution was to disable Windows' extension mechanism altogether, which is what Chrome and Firefox do. That update, however, affected Windows 10 in a different way than the flaw that Microsoft is trying to fix today. The old update made it easy for hackers to install malware by way of a sandboxed extension installed while a user's computer was online. The update just looked at a few of the websites that a user had visited and saved the extension for future visits. It essentially
