The Elden Ring is a fantasy action RPG that creates a vivid fantasy world with a variety of content and features. The development team at Codia Studios created a console RPG game that provides a real action experience while maintaining a series of features that allows new players to create their own character. In the land of Mandala where a war of light and dark rages, history has been repeating itself over and over again. A boy who lived a normal life and his two sisters

started an eternal conflict over the fate of the mankind. Their fight has now broken into our world. Humanity that had been protected by the Great Harmony has been swept away as the world fell into darkness. A savior has appeared. An Elden Lord appeared before the eyes of all the inhabitants of the Earth and the Great Harmony. "Thousand, Trillion, " ~She's the most qualified! Thousand, Trillion: "Why did it end up like this!" Who is that man standing before everyone's eyes? I shall become that person! He is currently chasing the "Games of the Soul" that the Great Harmony has bestowed upon the people. But will his way of thinking be the same as that of mankind? And how can such a person fight a great battle? A battle where the current form of humanity will protect this country and the world... -----

This console RPG game is currently in development for Xbox One, PS4, and PS Vita.

Successful social reintegration in the mentally handicapped after lobectomy for lung cancer. Lobectomy is a treatment option for lung cancer in patients with the mentally handicapped, yielding long-term survival. However, the social impact of lobectomy on the mentally handicapped remains controversial. This study reviewed our experience of lobectomy for lung cancer in 10 patients who had been admitted to our rehabilitation ward for an average of 30 months. Post-operative follow-up for all patients was completed 12 months after lobectomy, and after 3 and 9 years. Our results were compared with published data in the literature obtained from studies of lobectomy in asymptomatic patients (cardiopulmonary exercise testing of functional reserve and somatosensory evoked potentials). Spirometry results were significantly lower in our group than in the study by van der Walt et al., although there were no differences in comparison to comparable groups of

patients after thoracotomy in general. Lung volumes were lower at evaluation than before surgery, although mental ability measurements did not differ from baseline. Time from lobectomy to follow-up clinic was longer than in the literature, which resulted in a delay in post-operative rehabilitation. All patients and their relatives were satisfied with the outcome of surgery, with only a slight change in need of care. There were no mental handicaps apart from enuresis in three patients, which has a reported incidence of 20%. We
