i had been playing assetto corsa on pc since it was launched, when i bought the car which i was using in the screenshots. the car was a bmw m2. i had been using it since then, even though i owned a ferrari 458, i had decided to test the game. however, i could not test it properly because i was not able to finish the game. i could not decide which car to use, so i decided to test both, the ferrari and the bmw. the ferrari is an amazing car in assetto corsa, i really like it, and i think it can be the best car in the game, but it can have some problems, mostly related to grip, but also to the handling, and the braking. it can be said that the car can be slow in the corners, but it can improve this problem in the next update. i had played assetto corsa on ps4 at this point and it had been a great experience. i think that it is the best driving simulator available for consoles. i have played a lot of racing games on consoles, and i have not found a game that comes close to the quality and level of the game. we are extremely excited about assetto corsa competizione, the new official blancpain gt series videogame. thanks to the extraordinary quality of simulation, the game will allow you to experience the real atmosphere of the gt3 championship, competing against official drivers, teams, cars and circuits reproduced in-game with the highest level of accuracy ever achieved. sprint, endurance and spa 24 hours races will come to life with an incredible level of realism, in both single and multiplayer modes. assetto corsa competizione is the new official blancpain gt series videogame. thanks to the extraordinary quality of simulation, the game will allow you to experience the real atmosphere of the gt3 championship, competing against official drivers, teams, cars and circuits reproduced in-game with the highest level of accuracy ever achieved. sprint, endurance and spa 24 hours races will come to life with an incredible level of realism, in both single and multiplayer modes.

as for the presentation, we knew you would ask. the choice was between realtime reflections or a bsp-tree. in any case, we were very happy with the final result. now we know that you appreciate the sense of realism, but also the benefit of a realtime reflection. in fact, the world is a little brighter now, and we can finally see the claymore again. all the other textures are as good as the ones we had in the previous versions. the shape of the cars are also much more realistic, and as always, the modding community has been up to the task. get ready to be amazed by this new 3d assetto corsa on top of this, you can decide to use existing equipment, or opt for a new one. in the case of a new piece of equipment, the part of the car will be replaced. we also added a new feature of the pits. the new pits have been created to make you feel like you were in the cockpit of a real racing car. instead of asphalt, the pits have been built with some stone blocks that are perfectly aligned to the real thing. the colors of the block are also very accurate. in the pits, you can choose whether you are driving in the typical style, or you can take your car to the extreme with the automatic style. you can also choose between standard and race mode. race mode lets you decide what you can do to your car during a race. you can even have the car controlled by the ai or by a real driver. in fact, with a new back seat, you can have up to four players in a row. the team will have to ensure that its driver drives the car safely on the track. you can use the new plugin to connect a race to the internet and use data from real servers, or from practice. many people will have difficulty, and this is the reason

why we put this function in your hands. the other two options are very intuitive and will be very helpful for those who already know how to play multiplayer. if you want to know more about the game and its different configurations, here is what you can do. we also created a new tutorial video to learn how to play multiplayer. 5ec8ef588b
